

G ONE

AI-Generative Open-World RPG

VISION / PROJECT OVERVIEW

Let worlds emerge. Let stories unfold.

Infinity Galaxy Studio

IGS

Rethinking the Open World

Open worlds let us travel further. We want stories to open up more possibilities, too.

Traditional open-world games rely on maps, quests, character relationships and main storylines created in advance. This approach delivers rich, carefully crafted experiences, but often leads players through similar worlds and life paths.

G ONE seeks another possibility: a world that can be generated, continue to evolve and respond to player choices. Variation would extend beyond the map to characters, identities, relationships and stories.

Our vision is an AI-generative open-world RPG whose visual and cultural direction draws primarily on ancient Chinese culture. Entering its world would mean stepping into an experience that players can help shape.

Let the world begin the story.

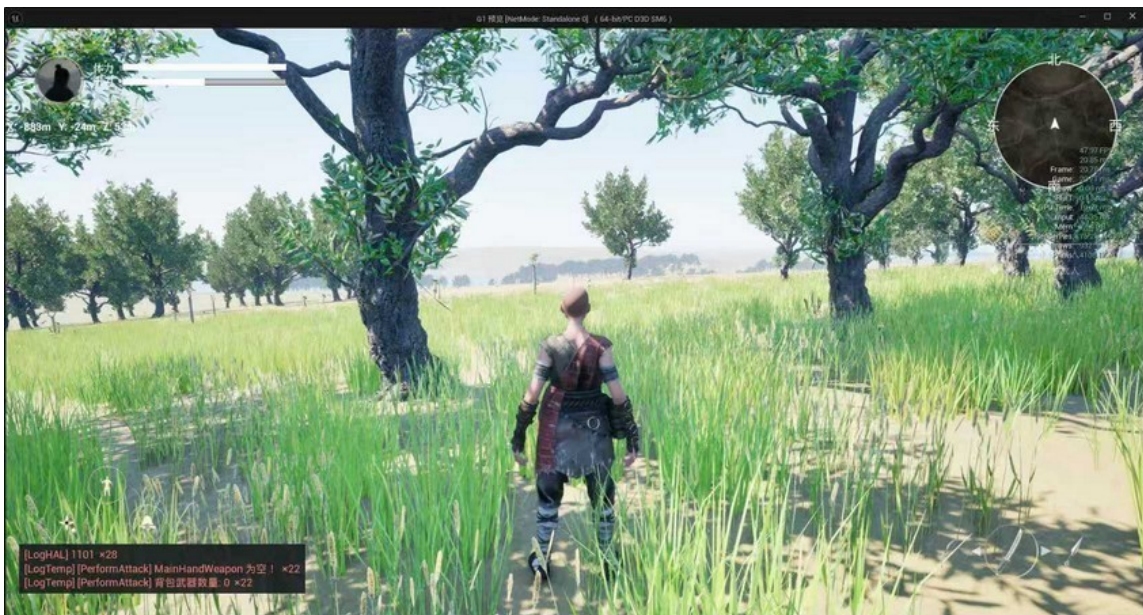

Let your choices become part of it.

A World That Emerges and Evolves

Each new beginning could reveal a different world and a different life.

We envision player backgrounds, identities, friendships and rivalries taking shape alongside the world. This would be more than terrain to explore: it would be a living setting shaped by people, relationships, factions and events.

Our aim is for the world to keep developing after the player enters it. Characters would have lives and relationships of their own, and factions their own goals. Events would respond to world conditions and player actions. Players would both participate in change and help bring it about.

Development image from the original material. Current visuals do not represent final product quality.

An Identity. A Life to Shape.

G ONE aims to let players begin with different identities and gradually find their own paths. Their experiences need not remain bound to a fixed profession or a predetermined main storyline.

Trade

Build a life through exchange and the choices it brings.

Practice Martial Arts

Find your place through growth and conflict.

Join the Military

Become part of wider events and a faction's fortunes.

Join an Organization / Build a Faction

Form connections with others and seek to influence the world.

These are life paths we hope to support. What matters most is how identity, relationships and choices come together to create a story that belongs to the player.

People, Factions and a Changing World

Stories emerge from relationships and change.

We aim to connect character actions, faction rivalries and changes in the economy, warfare and world events. The world would provide rules and tensions; player choices and the actions of other characters would shape how stories unfold.

People

Relationships and actions give stories their beginnings.

Factions

Different goals meet in cooperation, competition and conflict.

The World

Changes accumulate, shaping the conditions for what comes next.

May every playthrough become
a piece of history you have lived.

From a Game to a Longer-Term Vision

First, make G ONE an original game that people can play. Over time, build generative game capabilities that support worlds, characters, relationships and stories, and explore new ways to create worlds and content.

Past ~2 years

Algorithms and Core Frameworks

Research focused primarily on world generation and underlying frameworks, building a technical foundation.

Now

Game Development and a Core Demo

Turn research into playable experiences and bring the core player experience together.

Next

Validate and Refine the Experience

Use Demo findings to improve content, visuals and systems, while preparing for market validation and publishing.

Longer term

A Full Game and Lasting Capabilities

Work toward a full game release while continuing to develop generative worlds and AI-assisted content creation.

These are development directions, not commitments to release dates or specific feature delivery.

Infinity Galaxy Studio

Infinity Galaxy Studio

IGS / G ONE · G1

Through original games, we explore the convergence of artificial intelligence, procedural world generation and digital cultural content. Step by step, we aim to turn technology into products and build a lasting creative endeavor.

This overview presents the vision and development direction of G ONE. The project is in development. Current development visuals do not represent final product quality.
